TsUVnami™ is Uvisan's patent pending UV-C reflection technology that ensures unparalleled surface irradiation and maximum disinfection efficacy.

Using a combination of reflective materials and finishes, bulb placement, and low contact shelving, the UV-C radiating from the lamp sources is bounced in millions of random directions minimising shadowing or weak spots.

In tests the energy being transmitted to every part of the cabinet's interior has been measured at up to 300% more than a cabinet with traditional reflectors and bulb arrays.

- Patent pending best-in-class full 360° UV-C coverage
- UV-C radiation is reflected in millions of random directions
- Shadowing and weak spots are minimised
- Up to 300% more energy delivered to all parts of the cabinet
- Low contact shelving reduces touch shadows for a more complete clean
